Education

- Stanford University** — *Ph.D in Physics* 2017 - Sep 2023
- Thesis: High Energy Polarization Statistics and Geometry.
 - GPA: 4.0 (in required coursework).
- University of Oxford** — *MPhys in Physics* 2017
- First Class Honours with Distinction – top 10% of graduating class.
 - College: Christ Church

Fellowships, Honors & Awards

- Stanford Data Science Scholar (\$100k+)** — Stanford, USA 2021
- Future Investigator in NASA Earth and Space Science and Technology (\$160k+)** — Stanford, USA 2019
- Roach Prize for the most outstanding undergraduate across the sciences** — Oxford, UK 2017
- Hooke Prize for the most outstanding member of Christ Church in the sciences** — Oxford, UK 2017
- Oxford International Strategy Scholarship** — Oxford, UK 2016
- Christ Church Academic Scholarship** — Oxford, UK 2014-2017
- Gold, British Physics Olympiad** — London, UK 2013

Research

- Kavli Institute for Particle Astrophysics and Cosmology** — Stanford University, CA July 2018 - Present
with Prof. Roger Romani
- Set current state of the art in X-ray polarization recovery using Bayesian deep learning and computer vision.
 - Improved NASA IXPE polarization sensitivity by > 30% (Code adopted as official data analysis pipeline).
 - Created fast quadratic program + nested sampling approach to fit gravitational microlenses.
 - Designed testable (and fittable) emission models to explain observed polarization in relativistic plasma jets.
- Wu Tsai Neurosciences Institute** — Stanford University, CA Mar 2018 - Jun 2018
with Prof. Shaul Druckmann
- Developed biologically inspired recurrent neural network to reproduce path integration in the drosophila fly brain.
- NeuroAI Lab** — Stanford University, CA Dec 2017 - Mar 2018
with Prof. Dan Yamins
- Found transfer-learning certain affine transformations of images does not improve accuracies in object classification, using RotNet and ImageNet datasets.
- Department of Physics** — University of Oxford, UK Sep 2016 - May 2017
with Prof. Garret Cotter
- Modelled blazar spectra and investigated how they change travelling across different intergalactic media.
 - Placed limits on whether the Cherenkov Telescope Array will constrain the existence of axion-like particles.
- CLIC Test Facility** — CERN, Switzerland June - Aug 2016
with Prof. Philip Burrows
- Used beam dispersion to improve CTF3's Quadrupole scan and reduce uncertainty in the beam energy spread.
 - Designed and implemented new fitting program to enhance beam analysis pipeline.
- Plasma and Fusion Laboratory** — University of Science and Technology of China, Hefei June - Aug 2015
with Prof. Xuan Sun
- Improved plasma confinement in the KMAX axisymmetric tandem mirror machine by applying a bias voltage.

Selected Experience & Outreach

- G-Research** — London, UK June - Sep 2021
Quantitative Researcher
- Quantitative research intern working on forecasting capital markets.
- Peirson & Freedman** — Stanford, CA Aug 2018 - Present
Co-founder
- Conceived and designed iOS app [Dank Learning](#) that uses neural networks to generate memes.
- Wonderfest** — Bay Area, CA June 2019 - June 2020
Science Envoy
- Selected as one of 10 graduate students from Stanford and Berkeley.
 - Communicated science to public audiences as part of the Bay Area-wide Wonderfest program
- Stanford Diversity and First Generation Office** — Stanford, CA Oct 2018 - Oct 2020
First Generation and Low Income Student Mentor
- Mentoring undergraduates from underprivileged backgrounds in all matters of student life.

Selected Invited Talks

- Tests of gravitational milli-lensing in the blazar PKS 1413+135*, Max Planck Institute for Radio Astronomy, 2022
- Optimal Signal Extraction for IXPE and an Application to Blazars*, Naval Research Laboratory Colloquium, 2021
- Towards Optimal Signal Extraction for IXPE*, Third Science Collaboration Meeting (SCM03), 2021
- The Polarization Behavior of Synchrotron Self-Compton Emission in Blazars*, Understanding the Multiwavelength Blazar Variability - Workshop, Stanford, 2019
- AI in Design, Used Future: Symposium by Current Obsession*, Pratt Institute NY, 2018
- Episode 68, The NVIDIA AI Podcast*, 2018

Telescope & Computing Allocations

- | | |
|--|------|
| ALMA — High-frequency radio observations of IXPE targets, 7-14 day (Co-I) | 2021 |
| Nordic Optical Telescope — Multi-band polarization observations of IXPE targets, 87ks (Co-I) | 2021 |
| NuStar — Multi-Energy X-ray observations of IXPE blazar targets, 140ks (Co-I) | 2021 |
| Swift — Monitoring IXPE blazar targets with Swift, 240ks (Co-I) | 2020 |
| Google Cloud Platform — Parametric Density Estimation with Uncertainty using Deep Ensembles, \$1000 | 2020 |
| XMM-Newton — Exploring the Synchro-Compton transition in CGRaBS J0211+1051, 57ks (Co-I) | 2019 |

Open Source Software (★494+)

- MulensModel**: Python package for modelling gravitational microlensing events. [[Code](#)][[Paper](#)][[Webpage](#)]
- SSCpol**: Polarized relativistic jet simulation in C with Python wrapper. [[Code](#)][[Paper](#)]
- Dank Learning**: 'Show and Tell' image captioning for meme generation in Tensorflow. [[Code](#)][[Paper](#)][[Webpage](#)]
- Software skills*: Python — C/C++ — PyTorch — Tensorflow

Graduate Coursework

- | | |
|---|--|
| ◦ APPHYS293 (Theoretical Neuroscience) | ◦ CME212 (Advanced Software Development) |
| ◦ CS379C (Computational Models of the Neocortex) | ◦ EE364a & b (Convex Optimization I & II) |
| ◦ CS238 (Decision Making Under Uncertainty) | ◦ PHYS266 (Statistical Methods in Physics) |
| ◦ STATS207 (Time Series) | ◦ AA 214 (Numerical Methods for Compressible Flows) |
| ◦ CS224N (Natural Language Processing) | ◦ CS361 (Engineering Design Optimization) |
| ◦ CS230 (Deep Learning) | ◦ EE263 (Linear Dynamical Systems) |

Teaching

Stanford PHYS113 — *Computational Physics* (Lecturer and Teaching Assistant)

Winter 2021

Stanford PHYS100 — *Introduction to Observational Astrophysics* (Teaching Assistant)

Spring 2019
